LinkedIn | Portfolio | GitHub

Summary

Mobile Software Engineer with 3+ years of experience building and shipping production Flutter applications for Android and iOS. Responsible for architecting an 11-package, white-label mobile platform powering 4 travel brands, reducing delivery time by 57% through Clean Architecture, modular design, and CI/CD automation. Experienced in end-to-end mobile engineering, from architecture and implementation to App Store and Google Play releases.

Work Experience

Mobile Software Engineer | Continuous Net, Tunisia — 07/2023 - Present

Live apps: Tunisie Promo (Google Play, App Store) | Sunshine Vacances (Google Play, App Store)

- Architected an **11-package Flutter monorepo** powering white-label travel applications across **4 brands** and 5 backends, reducing per-brand delivery time by **57%** through reusable modules, **feature-driven Clean Architecture**, shared design systems, dependency injection and per-brand feature flags with role-based access.
- Built end-to-end booking workflows for hotels, transfers and activities from backend API documentation, collaborating with backend engineers on API contracts, error handling and business rules.
- Engineered a **reusable payment package** shared across multiple booking products, integrating in-app **payment gateway** pages with real-time transaction confirmation through **Socket.IO** and Firebase push notification events.
- Implemented multi-brand build configurations (Android flavors, iOS schemes and per-brand Firebase configuration) and contributed to GitLab **CI/CD** automation, including Firebase App Distribution and Google Play internal releases.
- Coordinated releases across multiple repositories through **Git version tags**, maintenance branches, dependency versioning and cherry-picked patches.
- Developed a centralized **EN/FR localization system** merging translations across packages, with per-brand default language settings; implemented unit and widget tests for booking workflows and API integrations.
- **Owned the complete mobile release lifecycle for 3 production applications** across iOS and Android, managing signing certificates, provisioning profiles, **TestFlight**, Google Play testing tracks, store submissions, review feedback and rejection fixes.

Flutter Developer Intern | Continuous Net, Tunisia — 02/2023 - 07/2023

- Developed a cross-platform Flutter application using **Firebase Authentication and Firestore**, implementing secure multi-provider authentication and role-based access control for 3 user roles.
- Built 15+ production-ready screens from **Figma** designs, ensuring responsive UI consistency across Android and iOS devices.

Flutter Developer Intern | ENSI – Municipal Services App — 10/2021 - 03/2022

- Created and customized Flutter apps (**web and mobile**) digitalizing municipal services (ticketing, appointments, real-time chat) using Provider and Hive for state management and local storage.
- Integrated **Firebase** (**Authentication**, **FCM**, **Firestore**) and **Google Maps** to build a role-based system (citizens, staff), enabling real-time data sync, incident reporting, and media uploads.

Projects

KotlinPosApp – Native Android Point-of-Sale System : GitHub

Kotlin | Android Jetpack Compose | CameraX | ML Kit | Hilt | Room | Retrofit | Coroutines | MVVM

- Engineered a native Android **POS** application with real-time barcode scanning, intelligent product lookup via a 3-API fallback chain, and offline-first inventory management using Room.
- Designed a scalable **Clean Architecture/MVVM** codebase with Hilt, Retrofit, Coroutines, and StateFlow for reactive UI, enabling isolated, independently testable feature modules.

BLE Proximity Tracker – Bluetooth LE Scanning & Real-Time GATT Communication : GitHub

Flutter | Kotlin | Platform Channels | BLE/GATT | Riverpod | Clean Architecture

- Built a Flutter + native Kotlin **BLE** proximity tracker via **Platform Channels**, with real-time **RSSI**-based distance estimation, sustained out-of-range detection (injectable-clock tested), and manufacturer-ID device resolution.
- Implemented real **GATT** connections for service discovery and device alerting, enforcing Clean Architecture across the platform boundary, achieving **87% unit test** coverage on the domain layer.

ImageFlow – Smart Image Processing & OCR App : GitHub

Flutter | ML Kit | GetX | Computer Vision | Clean Architecture

- Created an intelligent Flutter application integrating **Google ML Kit** for **face detection** with B&W filtering and document scanning with **OCR** and PDF export.
- Built a searchable history feature with thumbnails and metadata; applied automated content detection and contrast enhancement for accurate text extraction.

Technical Skills

Languages: Dart, Kotlin, Swift (Basic)

Mobile Development: Flutter, Android SDK, Jetpack Compose, Platform Channels

Architecture: Clean Architecture, Modular Architecture, MVVM, SOLID Principles, Dependency Injection, Design System

State Management: Riverpod, Provider, GetX, Flow/StateFlow

Database & Local Storage: Hive, SQLite, Room, Shared Preferences

Backend & Cloud: Firestore, Firebase (Authentication, Cloud Messaging, App Distribution)

Networking: REST APIs, WebSockets, Dio, Retrofit, Socket.IO

IoT & Connectivity: Bluetooth LE (BLE), GATT, BroadcastReceiver

CI/CD & DevOps: Git, GitHub Actions, GitLab CI/CD, Fastlane, Multi-flavor Builds

Testing & Release: Unit Testing, Widget Testing, Manual QA, Code Review, App Store Connect, TestFlight, Google Play Console

Education

National Engineering Diploma in Computer Science (EUR-ACE® certified) 09/2020 - 07/2023

National Engineering School of Computer Science – **ENSI**

Bachelor's Degree in Mathematics and Applications 09/2017 - 07/2020

Higher Institute of Computer Science and Mathematics – **ISIMM**

Languages

Arabic (Native) **English** (Professional) **French** (Professional)
