

Abir Cherif

Mobile Engineer | Flutter & Native Android

Tunisia | Open to Relocation | +216 93 649 677 | abircherif212@gmail.com

[Portfolio](#) | [LinkedIn](#) | [GitHub](#)

Summary

Mobile Engineer with 3+ years of production experience building scalable applications with Flutter and Native Android (Kotlin + Jetpack Compose). Skilled in Clean Architecture, state management (Riverpod, Provider), and modular SDK design. Proven track record in multi-flavor white-label platforms, CI/CD automation, and full release lifecycle ownership across App Store and Google Play, within Agile/Scrum environments.

Work Experience

07/2023 – Present | Mobile Software Engineer | Continuous Net, Tunisia

- Led mobile development as the primary mobile engineer for production apps (iOS & Android), owning the full lifecycle from architecture to store release ([Sunshine Vacances](#), [ZenifyTrip](#), [TunisiePromo](#)).
- Architected and delivered a scalable multi-flavor (white-label) Flutter platform supporting 4 brands, with multi-tenant configuration and a modular SDK (7+ internal packages), reducing development time by ~40%
- Designed and implemented a feature-driven Clean Architecture with dependency injection, reducing technical debt and accelerating onboarding for new developers.
- Built scalable application layers using REST APIs (Dio), navigation (GoRouter), and state management (Riverpod and Provider), including caching (Hive), real-time communication via WebSockets, and secure payment gateway integration
- Integrated Firebase services (Authentication, Cloud Messaging, App Distribution) and OneSignal for push notifications, supporting multilingual apps (EN/FR/AR) with RTL
- Designed and optimized CI/CD pipelines (GitLab, Fastlane) with multi-flavor builds, managing full release lifecycle: store submission, signing, compliance, and technical documentation

02/2023 – 07/2023 | Mobile Developer (Intern) | Continuous Net, Tunisia

- Designed and developed a cross-platform application using Flutter and Firebase services, implementing multi-provider authentication, and role-based access control
- Collaborated with backend and UX teams to design APIs and deliver 15+ production-ready screens from Figma, ensuring a responsive and consistent cross-platform experience across Android and iOS.

06/2022 – 08/2022 | Web Developer (Intern) | DRÄXLMAIER Group, Tunisia

- Developed a document archiving system using PHP/Laravel with role-based access control, supporting multiple file formats for 30+ internal users.
- Optimized database queries and frontend performance, reducing page load time by 25% and improving document management workflows.

10/2021 – 03/2022 | Mobile Developer (Intern) | ENSI – Municipal Services App

- Built and customized a Flutter mobile application digitalizing municipal services (ticketing, appointments, real-time chat) using Provider and Hive for state management and local storage.
- Integrated Firebase (Authentication, Firestore) and Google Maps to build a role-based system (citizens, staff), enabling real-time data sync, incident reporting, and media uploads.

Projects

KotlinPosApp – Native Android Point-of-Sale System : [GitHub](#)

Kotlin | Jetpack Compose | CameraX + ML Kit | Hilt | Room | Retrofit | Coroutines | MVVM

- Engineered a full POS Android app with real-time barcode scanning (CameraX + ML Kit), automatic product lookup via a 3-API fallback chain, and offline-first local storage using Room.
- Architected with Clean Architecture and MVVM, using Hilt for DI, StateFlow for reactive UI, and Jetpack Compose with Material3 for a polished dark/light theme.

ImageFlow – Smart Image Processing & OCR App : [GitHub](#)

Flutter | ML Kit | GetX | Computer Vision | Clean Architecture

- Created an intelligent Flutter application integrating Google ML Kit for face detection with B&W filtering and document scanning with OCR and PDF export.
- Built a searchable history feature with thumbnails and metadata; applied automated content detection and contrast enhancement for accurate text extraction.

Technical Skills

Mobile Development: Flutter (Dart), Kotlin (Android), Jetpack Compose, Android SDK

State Management: Riverpod, Provider, GetX, Coroutines, Flow/StateFlow

Local Data & Caching: Hive, Room Database, SharedPreferences

Backend & Cloud: Firebase (Auth, Firestore, Cloud Messaging, App Distribution)

Architecture: Clean Architecture, MVVM, Repository Pattern, Dependency Injection (GetIt/Hilt)

Networking: REST APIs, WebSockets, Dio, Retrofit, JSON

CI/CD & DevOps: Git, GitHub Actions, GitLab CI/CD, Fastlane, Multi-flavor Builds

Testing & Release: Unit Testing, Widget Testing, App Store & Google Play Deployment

Education

Engineering Degree in Computer Science (EQF Level 7)

09/2020 – 07/2023

National Engineering School of Computer Science – ENSI

Bachelor's Degree in Mathematics and Applications

09/2017 – 07/2020

Higher Institute of Computer Science and Mathematics – ISIMM
